

Synergy4

Presenting 4 products in 1

Synergy O2 International continues to maintain its philosophy of producing only the highest quality products with the highest quality ingredients. We continue to be a leader in our industry with our high quality products by using the most sophisticated technology in the world today.

Synergy 4 is the result of many years of research by our scientific team.

Synergy 4 has also been fortified with our exclusive O2 formula.

Synergy 4 is a super concentrated and technologically advanced formula.

Synergy 4 is truly "one of a kind" in the world of nutrition.

Utilizing a process of mixing and combining ingredients through a sophisticated process using advanced technology we combine and synergize four products into one.

Synergy 4 is a stable solution in a liquid colloidal form for immediate absorption into the body.

Synergy 4 is a formula that contains, DHEA, coenzyme Q10, a mixture of essential amino acids (HGH), vitamins and Synergy O2 (Oxygen).

DHEA • What It Is

DHEA, or dehydroepiandrosterone, is a hormone that is produced by the adrenal glands and is converted in other steroid hormones, including testosterone and estrogen. The levels of

DHEA in the body reach their maximum peak around the age of 20 and begin to decrease through the normal aging process.

In women DHEA works to replace the estrogen and reduce the possibilities of coronary and arterial disease, osteoporosis and other diseases associated with age.

In men, DHEA helps to increase energy.

What It Does

DHEA has many functions throughout our entire system. It helps to convert or stimulate the production of sexual hormones such as testosterone, progesterone and estrogen. DHEA is an integral part of supporting the proper function of the immune system. It helps to fight off bacterial and viral infections. It helps to reduce the severity of allergic reactions. It helps to support tissue strength and repair damaged tissue both internally and externally.

COENZYMES • Powerful Support

Coenzymes are molecules that are necessary in order to create many vital functions and chemical reactions throughout the body. Coenzymes make our entire system function in a more effective manner.

COENZYME Q10

The Coenzyme Q10 helps to ignite a "spark" in our cells that creates the energy that our body needs to process the foods we eat and convert them into our vital energy. Without the Coenzyme Q10 our system cannot produce "the spark" and therefore the energy.

Properties Of The Coenzyme Q10

Coenzyme Q10 is essential for the transformation and contribution of energy to every living cell.

Coenzyme Q10 may serve as a natural antihistamine to help relieve the symptoms of common allergies.

Coenzyme Q10 improves tolerance and recovery time from physical exercise.

Coenzyme Q10 fortifies the immune system since it increases the physiological capacity in utilizing oxygen.

Coenzyme Q10 helps to support cardiac issues since it is one of the main nutrients of heart tissue.

Coenzyme Q10 helps to support weight loss. Research has provided evidence that obese people and those who participate in very strict diets often present low levels of Coenzyme Q10.

Coenzyme Q10 supports longevity by slowing the pace of the aging process. Due to its antioxidant power it helps to neutralize free radicals.

Other health conditions that may benefit from Coenzyme Q10 are: muscular alterations, multiple sclerosis, alzheimer's disease, lupus, schizophrenia and fatigue.

VITAMINS

Vitamins are necessary for good cellular function and to support the proper function of the vital organs. Synergy 4 contains basic vitamins and nutrients that the body needs on a daily basis, it includes:

Vitamin A, Vitamin C, Vitamin D, Vitamin E, Vitamin B-1 Vitamin B-2, Niacin, Vitamin B-6, Folic acid, Vitamin B-, Biotin, Vitamin B-5, Calcium, Iodine from seaweed, Zinc, Chrome, Potassium, Aloe Vera, Fulvic acid, Choline, Inositol, Grape Seed Extract, Citrus Bioflavonoid and Lycopene.

Lycopene may help reduce the symptoms associated with prostate, lung, stomach, bladder and uterine disease. It also has the ability to reduce cholesterol in the blood and prevent prostate inflammation.

VITAMIN A helps protect sensitive skin and mucus membrane tissue. It also helps support good vision and acts as a protector for the retina. A deficiency of Vitamin has been known to cause night-time blindness and drying of the eyes. It is recommended to help prevent angina, genital herpes, colds, osteoarthritis and a weak immune system in people with HIV.

VITAMIN D helps to increase the flow of calcium into the bloodstream by promoting absorption of calcium and phosphorus from food in the intestines. It is also necessary for bone growth and bone remodeling.

VITAMIN C helps to develop strong teeth and healthy gums, bones, cartilage, and the absorption of iron. It also aides in repairing the skin, the production of collagen, fat metabolizing and the healing of wounds. It also has an antioxidant effect.

Vitamin B Complex is made up of 8 different vitamins, thiamine (B1), riboflavin (B2), niacin (B3), pyridoxine (B6), folic acid (B9), cobalamin (B12), (B12), pantothenic acid and Biotin. B Complex plays an important role throughout our body because it helps control the physical and metabolic wear and tear we receive daily. It helps support appetite control, the metabolism of proteins and fats, the formation of red blood cells, the use of oxygen by the cells and helps to maintain healthy skin.

HGH • Anti-aging

HGH is an endocrine hormone that we all possess however; with time it gradually decreases in the body. HGH is produced by the pituitary gland and when we reach the age of 65 our pituitary gland produces 15% to 20% of the HGH that was produced when we were adolescents. This decrease in the levels of HGH is now considered the cause for many of the symptoms that are associated with old age: wrinkling of the skin, weight gain, less energy and vitality, diminished sexual function and vision impairment.

• Doctors and Scientists accept and recognize that the production of HGH from the pituitary gland helps to prevent biological aging. HGH affects almost every cell in the body and helps restore and regenerate the skin, muscles, hair, bones, heart, liver and kidneys.

Doctors state that the immunological system is revitalized and general health can be restored. Its effect synergizes with the direct benefits of the amino acids, Glutamine, Arginine, Alanine, Aspartic Acid, Cysteine, Leucine, Lysine, Methionine, Phenylalanine and Tyrosine.

Main benefits derived from the combination

The combinations of these powerful ingredients in Synergy 4 have been formulated to provide the following benefits..

- Helps to increase energy levels.
- Helps to restore and increase deficient sexual activity.
- Helps to prevent and diminish inflammation in the prostate.
- Helps to diminish and regulate high cholesterol and triglycerides.
- Helps to balance hormones in both men and women.
- Helps protect the muscles of the heart.
- Helps improve the digestive system.
- Excellent supplement in treatments for circulatory and cardiac problems.
- Helps to slow down aging.
- Helps to balance the metabolism
- Helps to facilitate the reconstruction of tissue, muscle and bones.
- Helps to supply nutrients to the cells since it is absorbed quickly and easily.
- Helps in improving treatments for Alzheimers disease.
- Help to support recuperation from chronic fatigue.
- Helps to control weight
- Helps to support absorption of oxygen into the cells.

These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any diseases.

Manufactured and distributed by SYNERGY O2 INC., Made available exclusively through our distribution network.
